

# IMPORTANT SECURITY ESSENTIALS FACILITIES SOMETIMES OVERLOOK

A useful overview for access control & video surveillance in facility work environments.

If your company has multiple locations, it is important to consider whether or not your facility is required to meet a Global Security System Policy.

Although having a site-wide security policy will present a catalogue of cost-saving benefits, not having one does not mean all is lost. By adopting some basic principles for system choice, deployment and design, you will create lower operational costs and far better security provisioning.

Video surveillance cameras and access control systems are not all created equal. Selecting technologies that are in line with your own security initiatives and unique business nuances is of paramount importance.

Appoint ivelah as your trusted security provider and ensure you have the right security applications to adjust to your changing needs.

We believe the following security strategies will help improve the security at your facility.

## COMMITMENT TO EXCELLENCE

At ivelah we take the time to understand your overall business initiatives. This allows us to design & deploy access control & video surveillance technologies in both traditional and non-traditional ways, aligning our solutions directly to your goals.

By delivering consistent, exceptional solutions our goal is to be your go-to trusted security partner at all of your facilities – current and future. **How can we help you?**

We are committed to understanding your business challenges and objectives. Schedule a discover call with our security experts today!

## BASIC APPLICATION DECISIONS

When selecting or upgrading an access control/video surveillance system seek out those already established as a multi-site application and are capable of working across networks.

This will provide a more manageable system and an autonomous database, that will comply with corporate standards. It is still possible to give a local site access and decision-making rights for their own particular location requirements.

With an Enterprise Solution, you can make your own business choices for monitoring and event management:

- One single location that all facilities connect to
- Local facilities that oversee their own management
- A hybrid where you can pass responsibility between both

Operational costs, training and maintenance are all reduced with the single platform ideology. Integrations with your other business critical systems such as HR, training, cashless vending and transportation become far easier to introduce with one API or gateway to your enterprise-level access control system rather than the expense of developing them for multiple security systems.

## SYSTEMS ALREADY INSTALLED

If your system is already installed, you are still in a position to reduce operational costs and improve reliability.

Standardizing on hardware and auxiliary equipment like Locks and Power Supplies is a worthwhile first step into creating more reliable systems and cost savings. A network-able Power Supply can be effectively monitored from a central location or remotely accessible to your service provider. Reduced vendor pricing can be negotiated for support and replacement services where components are not unique to each site.

Add an additional tier of convenience and cost savings by introducing a more effective single access card technology. Replace readers with a more appropriate format that you use Consider developing one card holder database that is kept centrally and connect that to your corporate HR department for faster on-boarding and employee management.

New card technology and system configuration will open up far more possibilities for biometric configurations and other options.

*“By selecting the right provider who can facilitate different video technologies into a single collection point, a central monitoring center is achieved.”*

Evaluate the capabilities of your networks and connectivity between sites. Consider streaming the video from surveillance cameras to a central location.

Before simply replacing cameras, create a pixels per foot mandate, to ensure any camera deployed is actually providing usable video. We have found that more than 50% of facility cameras we have seen deployed have the wrong placement and/or incorrect specification. Make better use of video technology and your investment by having images that you can actually see and use.

It is possible to stream all video to an off-site third party Situational Awareness Center. This will allow you to repurpose your in-house monitoring and security staff. By selecting the right provider who can facilitate different video technologies into a single collection point, a central monitoring center is achieved. There is a host of other options that can accompany this service.

The protective measures you develop should address as many of these basic functions as possible with respect to harmful actions against your organization, locations, people and intellectual property.

### PREVENT

hazard condition or attempt by threat

### DETER

access or attach by an active threat

### DETECT

presence of hazard or threat

### DELAY

access or attack action

### ASSESS

situation

### RESPOND

by denying access, inhibiting attack actions, defending or protecting assets, minimizing consequences

### RECOVER

from effects of the attack

## ABOUT IVELAH

ivelah helps corporations and their facilities with their security system requirements. We believe you should be in a position to make the best choices for security system technologies. We uphold these principles with continued dialogue and consultation, providing essential information and insight for effective security system provisioning.

With comprehensive designs, scopes, and proposals complemented by effective implementation strategies, customers can look forward to innovative "future-proof" solutions.

ivelah provides security solutions  
**WITH THE SPEED, CONVENIENCE &  
TRUST IMPORTANT TO YOUR PROJECT**

The security industry specialists at ivelah are well-versed in assessing clients' precise needs and delivering, and servicing access control & video surveillance solutions that are smart, dependable, and scalable.

Reducing your risks and developing a security strategy that improves workflow and production puts your business needs at the heart of every design and decision we present.

**SCHEDULE A DISCOVERY CALL WITH OUR TEAM**

## ivelah IS COMMITTED TO DOING WHAT'S RIGHT FOR YOU

### the right **choice**

Make better-informed security decisions on what equipment to use in your security designs & technologies.

- Access Control
- Video Surveillance
- Perimeter Security
- Visitor Management

### the right **process**

Ensure your deployment & ongoing system management is running efficiently & in a cost-effective manor.

- Technology Choice
- Deployment Practices
- Reduce Cost of Ownership
- Scalable Solutions

### the right **connects**

Maximize the benefits your security system offers while connecting seamlessly to other operationally critical systems.

- Maintenance
- Operations
- State/Federal Regulations
- Information Technology

### the right **support**

Finally a support solution customized around you, your business needs, & budget.

- Comprehensive Service Plans
- Synchronized Warranties
- System Longevity Planning
- Managed Services
